

VIP Validation Report

Deployment: CI Connect 2026.08.1 (21 CFR Part 11 example extension)
Generated: 2026-09-01 00:13:23 UTC

Products Under Test

Product	URL	Version	Results
Connect	http://localhost:3939	2026.08.1	2 passed, 1 skipped (3 tests)

Summary

Total	3
Passed	2
Failed	0
Skipped	1
Status	PASS

Provenance

VIP version	2026.8.3
Run duration	0.8s
Python	3.14.7
Platform	Linux-6.17.0-1022-azure-x86_64-with-glibc2.39
Mode	full
Exit status	0 (OK — no failures)
Performed by	bdeitte (GitHub actor)
Run host	runnervmgx7h7
Commit	8a797875f836dc3ddca0230b4c975c6d54ff63ed (uncommitted changes present)
Branch	627/merge
CI run	https://github.com/posit-dev/vip/actions/runs/3345312555

Compliance Traceability

Coverage records that a scenario is tagged for a control, not that the scenario passed or even ran. A control shown as NOT RUN has a tagged scenario that ran and skipped itself, because this deployment does not expose what it probes or a version gate excluded it. A control shown as a GAP may instead belong to a product this run did not test, since those scenarios are excluded from the run and reach no result at all. A control shown as FAILED has a tagged scenario that ran and did not pass, so the control is not evidenced by this run. This section evidences the controls chosen for automation. It is not an attestation of regulatory compliance.

Controls	9
Covered, executed and passing	2
Covered, not executed	1
Covered, failing	0

Gaps	4
Not automatable	2

1 control counted as covered but had no scenario that ran: record-retention.

Control	Description	Coverage	Evidence
access-control-authorized-caller 21 CFR 11.10(d) risk: medium	An authorised caller can reach the Workbench session API	GAP	<i>no tagged scenario</i>
access-control-privileged-action 21 CFR 11.10(g) risk: high	Only authorised individuals may perform privileged actions	COVERED	A privileged action requires authorisation - passed at 2026-09-01 00:13:23
access-control-session-api 21 CFR 11.10(d) risk: high	An unauthenticated caller cannot reach the Workbench session API	GAP	<i>no tagged scenario</i>
audit-trail-publish 21 CFR 11.10(e) risk: high	Deployment of content is recorded with actor and timestamp	COVERED	Publishing content is recorded with an actor and a timestamp - passed at 2026-09-01 00:13:23
package-environment-reproducible 21 CFR 11.10(a) risk: high	A past package set can be retrieved so an analysis can be rebuilt	GAP	<i>no tagged scenario</i>
package-source-controlled 21 CFR 11.10(a) risk: medium	Analyses install packages from a defined, served repository set	GAP	<i>no tagged scenario</i>
personnel-training 21 CFR 11.10(i) risk: medium	Personnel have the education, training and experience to perform their tasks	N/A (manual)	<i>no tagged scenario</i>
record-retention 21 CFR 11.10(e) risk: high	Audit trail entries cannot be altered or deleted by ordinary users	NOT RUN	The audit log does not offer a deletion method - skipped at 2026-09-01 00:13:23
signature-manifestation 21 CFR 11.50 risk: high	Signed records display the signer's printed name, date/time and meaning	N/A (manual)	<i>no tagged scenario</i>

Failures & Skips

Every check that did not pass, in full. Passing checks are counted above, and every check appears in Detailed Results below.

Skipped (1)

SKIP

The audit log does not offer a deletion method

Connect

Connect

this deployment does not advertise allowed methods for the audit log

```
examples/21CFR_part11_validation/test_21CFR_part11_connect.py::test_audit_log_not_deletable
0.14s
```

Test procedure

- > Given Connect is accessible at the configured URL
- > When I ask which methods the audit log endpoint allows
- > Then deletion is not among them

Detailed Results

Connect

3 tests — 2 passed, 1 skipped

PASS A privileged action requires authorisation Connect Connect

examples/21CFR_part11_validation/test_21CFR_part11_connect.py::test_privileged_action_denied
0.02s

Test procedure

- › Given Connect is accessible at the configured URL
- › When I request a privileged administrative endpoint without credentials
- › Then the request is refused

PASS Publishing content is recorded with an actor and a timestamp Connect Connect

examples/21CFR_part11_validation/test_21CFR_part11_connect.py::test_audit_trail_publish 0.16s

Test procedure

- › Given Connect is accessible at the configured URL
- › When I list recent audit log entries
- › Then each entry records an actor and a timestamp

SKIP The audit log does not offer a deletion method Connect Connect

this deployment does not advertise allowed methods for the audit log

examples/21CFR_part11_validation/test_21CFR_part11_connect.py::test_audit_log_not_deletable
0.14s

Test procedure

- › Given Connect is accessible at the configured URL
- › When I ask which methods the audit log endpoint allows
- › Then deletion is not among them
